"Progress in Forensic Genetics" includes mainly 3-page summaries of 350 presentations at the 21st International Congress of the International Society for Forensic Genetics held from the 13th to the 16th of September 2005 in Ponta Delgada, The Azores, Portugal. The area of forensic genetics is rapidly changing and the book offers short presentations of new forensic genetic information that has not yet been published elsewhere. Contributions from forensic genetic scientists come from all over the world.
