著者:Wackers, Frans J. 编

出版者:Humana Pr Inc

出版时间:2004-1

装帧:HRD

isbn:9780896039834

The first comprehensive guide to establishing and running a well-organized and state-of-the-art nuclear cardiology laboratory. Topics range widely from basic questions on purchasing equipment and determining space requirements to such day-to-day problems as scheduling patients and deciding what to tell them prior to arriving in the laboratory. For operational basics, seasoned experts detail radiation safety requirements, imaging and procedure protocols, routine quality assurance rules, billing procedures, dealing with commonly encountered artifacts, and preparing for accreditation. An accompanying compact disc provides full color digital copies of all the figure and illustrations in the book, links to useful websites, and illustrative video clips.
