Pharmaceutical Dosage Forms and Drug Delivery Systems is an essential text for core courses taught early in the PharmD curriculum. Readers will find this book to be the most comprehensive source on pharmaceutical dosage forms (the physical forms in which a drug may be administered such as solid, liquid, coated, noncoated and the nonmedicinal ingredients used to produce these forms) and drug delivery systems (the ways in which the drug is administered such as orally, topically, and intravenous and the principles and science behind each system). The eighth edition of this popular text will follow the same format as the current edition. The content coincides with the CAPE (AACP's Center for Advancement of Pharmaceutical Education) Outcomes, as well as APHA, and NAPLEX competencies and standards
