出版者:Elsevier Science Health Science div

出版时间:2006-9

装帧:Pap

isbn:9780443100482

This title is directed primarily towards health care professionals outside of the United States. It is an essential pocket guide for nurses coping with patients with acute medical conditions. It focuses on events within the first critical twenty-four hours of admission and provides an up-to-date, evidence-based guide to the management of these patients. The most common emergency medical conditions are described and explained in terms of the underlying disease mechanisms. The book also describes the assessment, observations and management in relation to disease processes and in line with the latest guidelines and protocols. Nursing care is related to the underlying disease.
