出版者:Elsevier Science Health Science div

出版时间:2005-11

装帧:HRD

isbn:9780323034326

Renowned authorities, all chosen for their expertise in their respective areas, present their own experiences and step-by-step guidelines on the current management and

treatment of disorders affecting the nervous system. This book puts major emphasis on treatment, with diagnosis, epidemiology, and pathophysiology discussed only when they affect treatment strategies and decisions. * Inclusive coverage allows you to treat the gamut of neurologic diseases effectively. * A personal presentation format simulates the clinical experience of asking advice of a trusted colleague. * Algorithms and patient resource information complement each chapter. * Succinct therapeutic chapters are ideal study tools for the exams.
