1098 full-color images perfectly capture the appearance of the complete range of corneal and external eye diseases. Compiled by two of the world's foremost authorities on the subject and created using state-of-the-art digital imaging technology, they represent the sharpest, most accurate collection of photographs of the cornea ever

published. Updates include a wealth of new images contributed by ophthalmologists from around the world; updated and expanded coverage of refractive surgery, external eye manifestations of chemical and biological warfare, and molecular genetics of corneal dystrophies; and a new Image Bank on CD-ROM. This comprehensive visual library of corneal disorders is ideal for reference during patient evaluation, screening, and treatment. * Covers all of the corneal and external eye conditions you might ever encounter—including tumors, dystrophic and degenerative disorders, inflammatory diseases, corneal manifestations of systemic disease, traumatic injuries, and therapeutic and reconstructive surgical procedures. * Offers the expertise of internationally renowned experts who have developed many innovative techniques for diagnosing and treating corneal and external eye diseases. * Features magnified insets that provide close-up views of important features. * Uses an oversized, 9 13/16" x 12 1/16" format to display images at an optimal size for convenient reference.
