isbn:9780275985226

Over the past 15 years, there has been a 300 percent increase in the use of psychotropic medications with girls and boys under the age of 20, and prescriptions for preschoolers have skyrocketed. A stellar group of authors from across disciplines explains this increase, questions the causes, and presents disturbing thoughts regarding this phenomenon and the risks it creates for children. This is riveting reading for all who care about the youngest members of society.
