When a patient presents to a clinician, it is vitally important for that doctor to be able to differentiate quickly and correctly between the various diseases to which the presenting symptoms may be attributed. "French's Index of Differential Diagnosis" is

unparalleled in providing the clinician with invaluable assistance in this regard. Arranged alphabetically, and based upon presenting symptoms, the text takes the reader through a step-by-step approach to that presentation, culminating in a description of the different diagnoses that it might represent. Where instrumental in aiding a correct diagnosis, full colour or black and white illustrations are included throughout. The fourteenth edition of "French's Index of Differential Diagnosis" offers a succinct and well-illustrated aide-memoire that will be indispensable to trainee and established doctors in both general and hospital practice, and an invaluable reference for the clinical undergraduate.
