This popular and successful book, having been translated into major languages, has now been fully revised, updated and expanded into a third edition. The text: provides a step by step guide to all the commonly performed procedures and techniques;

includes the very latest information on new techniques and materials, such as those for cosmetic surgery; contains new chapters covering techniques and management of corneal exposure; extensively illustrated with clear line diagrams to illustrate all the procedures described there; contains an expanded chapter on lacrimal surgery by Mr Richard Welham; and, still retains its original aim to provide a systematic approach and an invaluable practical guide for all those who operate on eyelids. From the reviews of previous editions: "Collin has managed to include those extremely pertinent points which are important to the operating surgeon...the book is full of a wealth of information on eyelid surgical procedures." ("Plastic and Reconstructive Surgery").
;½...a really excellent book packed with detail...I would recommend that a copy of this book be kept in all eye theatres...;½ (;½Journal of the Irish College of Physicians and Surgeons;½).
