装帧:Pap

isbn:9780721663357

This full colour atlas provides easy access to the vast and emerging information related to the diagnostic application and interpretation of cytology and cytopathology in veterinary medicine. A valuable reference for Veterinarians, it will help them when confronted with problematic microscopic findings or to affirm an initial diagnostic impression. Covering a wide range of diseases that affect multiple organ systems, special emphasis is placed on those areas in which the application of cytology has the greatest diagnostic value. "Atlas of Canine and Feline Cytology" clearly illustrates most of the microscopic findings that are commonly seen and highlights those that deserve additional interrogative observation in formulating a diagnostic impression.
