isbn:9780387692210

Brain metastases are the most dreaded complication of systemic cancer, affecting some 170,000 people a year, a far greater incidence than primary brain tumors. This book presents current information on the presentation and management of patients with brain metastases, providing available data, giving guidelines that can be applied in day to day practice, updated information for neurosurgeons, radiation oncologists, medical oncologists, and neuron-oncologists, and as an overview for physicians in training.
