Written and edited by the world-famous expert G.O.H. Naumann, this textbook delves into the details of ocular structures such as the nuances of morphology, surgical anatomy and pathology. The text covers unique features of intraocular surgery in

closed system and open eye contexts. It goes on to cover crucial aspects of restoring the anterior chamber. Then it delineates the spectrum of potential complications in (pseudo-) exfoliation-syndromes as well as the most vulnerable cell populations. Readers are also treated to the features of normal and pathologic wound healing after non-mechanical laser and mechanical inventions. Brilliant artwork and sketches illustrate the complex pathology.
