This workbook, designed specifically as a companion to Comprehensive Radiographic

Pathology, 4th Edition, allows students to better understand the content covered in the main text through a variety of workbook activities including labeling, multiple-choice, fill-in-the-blank, case studies, and self-tests. These activities enable students to better understand the complex disease processes they will help diagnose through the use of medical images. The workbook also ensures understanding of the disease processes, their radiographic appearance, and their likely treatment.

Features the same comprehensive coverage found in the main text for a better understanding of the disease processes. Diagnostic quality images for labeling and analysis lets students practice on images similar to what they will see in practice so they can become familiar with how pathologies appear in different imaging modalities. A wide variety of exercises covering anatomy, technique adjustment, and pathology identification reinforce concepts and assess learning. Case studies with pathology images and related questions require students to apply knowledge to specific clinical examples. Self-tests at the ends of each chapter with 25-40 multiple choice questions encourage students to assess their own mastery of the content.
