Sepsis: New Insights, New Therapies brings together contributions from an international group of experts in diverse fields to consider how the various pathways implicated in early and late sepsis interact, with a particular emphasis on novel concepts and potential new therapeutic approaches. Topics covered include adaptive immunity, inflammation, neuroendocrinology, bioenergetics and metabolism. Several chapters in the latter half of the book are particularly concerned with treatment strategies involving modulation of the neuroendocrine response. Addresses the

frequent, but under-recognised condition of sepsis and discusses new ways to prevent and treat it Describes numerous pharmacological approaches to therapy for early and late sepsis Includes detailed discussion of the various physiological systems implicated in sepsis Presents an international perspective, featuring contributions from experts from laboratories worldwide involved in the study of sepsis Sepsis: New Insights, New Therapies is an invaluable resource for all critical care physicians and researchers. It is alsoinformative reading for immunologists, endocrinologists, neuroendocrinologists, physiologists, and pharmacologists.
