The Calliphoridae are a widespread family of insects of great medical, veterinary and forensic importance. They encompass, among others, the familiar greenbottle and bluebottle filth flies. The book presents a taxonomic revision of the blowflies of Fennoscandia and Denmark. Keys and diagnoses, descriptions, summaries of distribution and biology are given for all taxa. Male and female genitalia are illustrated in great detail. The nomenclature is revised and numerous new specific and generic synonymies are established. Full references to the primary literature are given. A new subfamily classification of the world Calliphoridae is proposed on the basis of cladistic principles. The definition and higher classification of the family and related groups are discussed.
