著者:Trevor Price

出版者:Roberts & Company Publishers

出版时间:2008

装帧:Paperback

isbn:9780974707785

In *Speciation in Birds*, Trevor Price, a University of Chicago professor and leading expert in the field, has written the most authoritative and modern synthesis on the subject to date. In clear and engaging prose and through beautiful illustrations, Price shows us why the field is as exciting and vibrant as ever. He evaluates the roles of

natural selection and sexual selection. He asks how speciation contributes to some of the great patterns in species diversity such as the large number of species in the tropics, and the many endemic species on isolated islands. Throughout the book, Price emphasizes the integration of behavior, ecology, and genetics.

作者介绍:

Trevor Price has spent his professional career studying speciation in birds, working for his doctoral thesis on the famous adaptive radiation of Darwin’s finches in the Galapagos Islands. For the past 20 years he has been studying speciation and adaptive radiation in the Himalayas. He is Professor of Biology at the University of Chicago.

目录:

- 1. Introduction
- 2. Geography and Ecology
- 3. Geographical variation
- 4. Parapatric Speciation
- 5. Ecological speciation
- 6. Ecological controls and speciation on continents
- 7. Behavior and ecology
- 8. Geographical isolation and the causes of island endemism
- 9. Social Selection
- 10. Social selection and the evolution of song
- 11. Divergence in response to increased sexual selection
- 12. Social selection and ecology
- 13. Species recognition
- 14. Mate choice at the end of speciation
- 15. Hybrid zones
- 16. Genetic incompatibility
- 17. Conclusions
