This guide will enable the identification of around 1,000 of the more common insects found in the region. The carefully chosen selection represents all insect groups, with a bias towards the more prominent species, so that all the butterflies, grasshoppers, crickets, damselflies, and dragonflies occurring in Britain have been included. Over 700 color photographs show the species in their natural habitats, and around 100 line drawings clearly show important features, enabling accurate identification.
