isbn:9780930031817

Dobbs and Ober closely focus on the lives of Northern Forest residents -- a mill worker, a forester, several loggers, a fishing guide, and a Christmas tree-farming family -- and discover an extraordinary sense of place that arises in those who have a continuous, working relationship with the land. The authors assert that environmentalists must finally reinvent their approach to land conservation by creating meaningful, respectful alliances with residents of the special areas they would save.
