This book is an introduction to the science of plant classification and identification, or plant taxonomy. It defines terms used in describing a flowering plant and its parts and presents the characteristics of families of common flowering plants in the Philippines. For a clearer understanding, descriptions are supplemented by drawings and photographs. Plants commonly found in gardens, parks, and vacant lots are used as examples and are therefore readily available for study. A section is also devoted to the establishment and maintenance of an herbarium.
