Moms receive a deluge of helpful advice. From the moment they announce their pregnancy, they are flooded with articles from friends and family, pamphlets from the doctor's office, and stories and research they clip and save themselves. With so much paper, it's hard-if not impossible-to track down that great article on potty training they read during pregnancy by the time they actually need it. The Mommy File is an organizational system for saving the best parenting articles, clippings, and handouts to help busy parents through each stage of their child's development. This handy file is colorfully illustrated by artist Tracy Rumpf. Sturdy file pockets with pullout tabs hold all the articles parents need. The page of preprinted and blank stickers allow every mom

to personalize the file in the way that works best for her. Some may choose to organize by developmental age and others by topic, but the important thing is they can find what they seek in seconds, instead of hunting for days. As the child grows and new subjects become more pertinent, moms can simply resticker the tabs. The Mommy File is an invaluable tool for any parent. It's the gift of organization, and what mom couldn't use more of that?
