This special volume provides a broad overview and insight in the way numerical methods are being used to solve the wide variety of problems in the electronics industry. Furthermore its aim is to give researchers from other fields of application the opportunity to benefit from the results which have been obtained in the electronics industry. It is a complete survey of numerical methods used in the electronic industry. Each chapter is self-contained. It presents state-of-the-art applications and methods, and includes internationally recognised authors.
