Fishes of the Cambodian Mekong covers the major resource groups likely to be encountered in the fisheries of the Cambodian Mekong. These groups include sharks, batoid fishes and bony fishes. The introduction outlines the geographical, environmental and ecological factors influencing fisheries, and the basic components of the fisheries of the Cambodian Mekong. As an aid to identification to higher taxonomic levels, a pictorial index to families and an illustrated guide to orders and families are included. Each species account provides scientific nomenclature, FAO names in English, local names, size, notes on fisheries, habitat and biology, and one or more illustrations. Fishes of the Cambodian Mekong is fully indexed and a list of related literature is appended. Finally, 27 colour plates are presented.
