This valuable resource provides extensive climatological data for over 4,000 National and Cooperative Weather Stations throughout the United States. Weather America begins with a new Major Storms section that details major storm events of the nation

and a National Rankings section that details rankings for several data elements, such as Maximum Temperature and Precipitation. The main body of Weather America is organized into 50 state sections. Each section provides a Data Table on each Weather Station, organized alphabetically, that provides statistics on Maximum and Minimum Temperatures, Precipitation, Snowfall, Extreme Temperatures, Foggy Days, Humidity and more. State sections contain two brand new features in this edition -- a City Index and a narrative Description of the climatic conditions of the state. Each section also includes a revised Map of the State that includes not only weather stations, but cities and towns.
