isbn:9780195306200

"Creative Problem-Solving in Ethics" is a how to book for creative ethical problem-solving, specifically orientated toward college courses in ethics. It brings a vital but often overlooked set of skills for "thinking out of the box": diversifying options, lateral thinking, reframing problems, approaching conflicts as creative opportunities, and many others. Applications and exercises range across ethical issues, from the familiar to some of the toughest.
