Epistemology, or the theory of knowledge, is concerned with how we know what we do and what justifies us in believing what we do. The philosophical literature in epistemology has mushroomed in the past four decades, and interest in the topic continues to be widespread. In this anthology, Fred Dretske and Sven Bernecker have collected the most important and influential writings in epistemology. It provides the fullest review to date of contemporary epistemology, including frequently neglected topics such as dominant responses to scepticism, introspection, memory, and testimony. Forty-one readings are organized into fifteen subject areas that are key to a broad understanding of contemporary theory of knowledge. A readable introduction to each subject outlines the problems discussed in the essays that follow so readers can more effectively focus on analysing them. The book is primarily designed for undergraduate courses on theories of knowledge. It will also be of use to university students in other fields as well as interested general readers.
