出版者:Oxford Univ Pr

出版时间:2001-8

装帧:Pap

isbn:9780195141221

This introduction to critical thinking covers the areas of (A) thought and language, (B) systematic reasoning, and (C) modes of proof. In addition to traditional topics such as ambiguity, definition, informal fallacies, deduction, and induction, this book uniquely presents the different rules of evidence in fields such as law, science, literature, and history. An accompanying Instructor's Manual contains the answers to the book's extensive exercises.
