

Mindsight

Scientific evidence of remarkable near-death and out-of-body experiences in which the blind can see with a unique kind of perception.

Mindsight

Second Edition

Near-Death and Out-of-Body Experiences in the Blind

Ring and Cooper explore evidence that even those blind from birth can "see" during near-death experiences. Their evidence reveals a unique type of perception. More than just "seeing," it involves a deep awareness and profound ability to know that the authors have called "Mindsight."

- Near-death cases in which the blind report "seeing"
- Evidence for transcendent visual abilities
- Scientific investigation of 31 NDE and OBE cases

Kenneth Ring and Sharon Cooper

Foreword by Charles T. Tart

Epilog by Arthur Hastings

'How to imagine the imagination' is a topic that draws philosophers the way flowers draw honeybees. From Plato and Aristotle to Wittgenstein and Sartre, philosophers have talked and written about this most elusive of topics - that is, until contemporary analytic philosophy of mind developed. Perhaps it is the vast range of the topic that has scared off our contemporaries, ranging as it does from mental images to daydreams.
