This volume provides a comprehensive introduction to electronic technology, products, and manufacturing processes. Reviews principles of production and electronics fundamentals (electronic components, interconnections, printed wiring boards, soldering and solderability); explains automatic assembly (automation, leaded

component insertion, and surface-mount device placement); discusses life-cycle engineering (design for assembly, quality and reliability, testability, and environmental stress screening); and explores manufacturing systems (facilities and materials handling, production and inventory control, production economics). For electrical or industrial engineers interested in electronics manufacturing. </P>
