The "Animals ATTACK series will appeal to young readers who are fascinated by true stories of adventure, danger, and survival. Each book in the series presents compelling, real-life stories of people who have survived terrifying attacks by sharks, tigers, bears, and a wide range of other animals. Each book also examines the circumstances that would cause animals to attack humans, how common these attacks are, and the likelihood of survival. An alien species invaded the United States in 1990, but the vicious creatures were not from outer space. Killer bees are easily disturbed, quick to swarm, travel in large numbers, and chase victims for over a mile. This book explains the migration of killer bees and the frightening problems they cause.
