isbn:9781560654902

Detailed photographs captivate readers as they follow the changes in common plants during a growing season. Easy-to-read texts outline how beans, carrots, and sunflowers develop from seeds to full-grown plants. Readers also learn how apple trees change throughout the seasons. This series explores and supports and standard "The Living Environment: The Flow of Matter and Energy," as required by Benchmarks of Science Literacy: Project 2061.
