著者:Zelkowitz, Marvin V. 编

出版者:Academic Pr

出版时间:2007-5

装帧:HRD

isbn:9780123737458

This series covers new developments in computer technology. Most chapters present an overview of a current subfield within computers, with many citations, and often include new developments in the field by the authors of the individual chapters. Topics covered in this title include hardware, software, theoretical underpinnings of computing, and novel applications of computers. This current volume emphasizes architectural advances and includes five chapters on hardware development, games for mobile devices such as cell phones, and open source software development. The book series is a valuable addition to university courses that emphasize the topics under discussion in that particular volume as well as belonging on the bookshelf of industrial practitioners who need to implement many of the technologies that are described. This title features: current information on power requirements for new processors; development of games for devices with limited screen sizes (e.g. cellular telephones); open source software development; and, multicore processors.
