In the past three decades, China has successfully transformed itself from an extremely poor economy to the world's second largest economy. The country's phenomenal economic growth has been sustained primarily by its rapid and continuous industrialisation. Currently industry accounts for nearly two-fifth of China's gross domestic product, and since 2009 China has been the world's largest exporter of manufactured products. This book explores the question of how far this industrial growth has been the product of government policies. It discusses how government policies and their priorities have developed and evolved, examines how industrial policies are linked to policies in other areas, such as trade, technology and regional development, and assesses how new policy initiatives are encouraging China's increasing success in new technology-intensive industries. It also demonstrates how China's industrial policies are linked to development of industrial clusters and regions.

## 作者介绍:

Zheng Yongnian is Professor and Director of the East Asian Institute, National University of Singapore.

Bo Zhiyue is Senior Research Fellow at the East Asian Institute of the National University of Singapore. He obtained his Bachelor of Law and Master of Law from Peking University and Ph.D. from the University of Chicago.
