Many recent techniques for digital image enhancement and multiscale image representations are based on nonlinear partial differential equations (PDEs).

This book gives an introduction to the main ideas behind these methods, and it describes in a systematic way their theoretical foundations, numerical aspects, and applications. A large number of references enables the reader to acquire an up-to-date overview of the original literature.

The central emphasis is on anisotropic nonlinear diffusion filters. Their flexibility allows to combine smoothing properties with image enhancement qualities. A general framework is explored covering well-posedness and scale-space results not only for the continuous, but also for the algorithmically important semidiscrete and fully discrete settings. The presented examples range from applications in medical image analysis to problems in computer aided quality control.

作者介绍:

Joachim Weickert is a German professor of mathematics and computer science at Saarland University. In 2010, Weickert won the Gottfried Wilhelm Leibniz Prize for his work in image processing.[1][2]

Weickert did his undergraduate studies at the University of Kaiserslautern and then stayed there as a graduate student, earning his doctorate in mathematics in 1996 under the supervision of Helmut Neunzert; his dissertation was entitled Anisotropic diffusion in image processing.[3] After taking postdoctoral research positions at the University of Utrecht and the University of Copenhagen, he became an assistant professor at the University of Mannheim, and earned a habilitation degree there in 2001. In 2002, he took a faculty position as a full professor at Saarland University.[4]

目录: Contents

- Image Smoothing and Restoration by PDEs
- Physical Background of Diffusion Processes
- Linear Diffusion Filtering
- Nonlinear Diffusion Filtering
- Methods of Diffusion-Reaction Type
- Classic Morphological Processes
- Curvature-Based Morphological Processes
- Total Variation Methods
- Conclusions and Further Scope of the Book
- Continuous Diffusion Filtering
- General Model
- The Structure Tensor
- Theoretical Results
- Scale-Space Properties
- Semidiscrete Diffusion Filtering
- General Model
- Theoretical Results
- Scale-Space Properties
- Relation to Semidiscrete Models
- Discrete Diffusion Filtering
- General Model
- Theoretical Results

Scale-Space Properties
Relation to Semidiscrete Models
Examples and Applications
Edge-Enhancing Diffusion
Coherence-Enhancing Diffusion
Conclusions and Perspectives
Bibliography (453 references)
Index (about 500 entries)
