Everyone loves baby animals. This new Pebble Plus series highlights the lives of animal offspring, including how they are born, what they look like, how they compare to mature animals, and how they eat, play, live, learn and grow. Pebble Plus offers the same high-quality nonfiction topics and low reading levels of Pebble Books in an enlarged, graphically enhanced format. This series explores and supports the standard "The Living Environment: Diversity of Life, Heredity, Cells, Interdependence of Life, and Evolution of life," as required by Benchmarks for Science Literacy: Project 2061.
