Strategies for Reading Assessment and Instruction is a core text for the reading diagnosis and assessment course. Each strategy description follows a three-part sequence including purpose, materials, and procedures. The most popular asset of this text is the practical intervention strategy guides called IF/THEN charts, with page

references for users to refer to specific intervention strategies in the book. These charts help identify a struggling reader problem and then indicate that if a child struggles with something, the charts can be used to help remediate. The authors have carefully revised the text to ensure the information in the book is as practical as possible and include assessment tools such as assessment instrument descriptions, rubrics, checklists, and running records.
