Good finishing can be the key to a successful woodworking job, and it is something that can be achieved by anyone. All that you require is some simple equipment, good preparation, and a solid understanding of what is required. Like many things, it is not a

secret or special technique that makes a professional job, but the careful selection of the best products and a whole-hearted adherence to some basic principles. This book aims to give the reader a better idea of the types of finish available, as well as the confidence to try them out. It includes a general review of the main finishes, giving a technical description of each and outlining the equipment used. It provides a detailed look at how to prepare for a job - from stripping the wood to safety - before moving onto a step-by-step analysis of each method. Wide range of finishes covered in this final section includes: French polishing; wax finishes; varnishes; oil finishes; spray finishes; paint.
