Competency-based learning for the academic classroom Developed for academic courses, MICROSOFT(R) WINDOWS(R) 2000 NETWORK INFRASTRUCTURE

ADMINISTRATION, Second Edition, helps students build the skills they need on the job and for MCP Exam 70-216, a core requirement for MCSE certification and an elective on the MCSA track. This courseware is adaptable for a full 16-week semester or a 6-week, 8-week, or 10-week course. The textbook is filled with competency-based practice exercises that students complete on their own; the companion lab manual features additional skill-building activities ideal for your classroom's computer lab. Along with the textbook and lab manual, students receive a Student CD-ROM containing study aids; an electronic version of the textbook; the Microsoft Encyclopedia of Networking, Second Edition, eBook; and information on how to begin a career in information technology. They also get a 120-day evaluation version of Microsoft Windows 2000 Server software. An Instructor CD-ROM containing a complete set of instructor support materials--including lecture outlines, teaching tips, Microsoft PowerPoint(R) slides, a test bank, and detailed lab setup instructions--is also available.
