Walk on the wild side Here is a close-up look at predatory animals, how they locate, capture, and devour their prey. Books in this series explore animals' hunting and survival techniques and the instincts that drive them. While fascinating facts keep readers engaged, the text also explains essential life science concepts such as food webs and ecosystems. This series explores and supports the standard "The Living Environment: Interdependence of Life," as required by the Benchmarks for Science Literacy: Project 2061.
