出版时间:2006-1

装帧:HRD

isbn:9780716789192

Structured around societal situations, "ChemCom" is a laboratory based text, that centres itself around decision making activities, where students apply their chemistry knowledge to realistic situations. The new edition has been vividly brought to life, with three times the number of photographs, new drawings from illustrators of "Scientific American" magazine and a revitalized design. Teachers will also appreciate the full range of upgraded supplementary resources and the overall updating of the textbook.
