isbn:9780778718727

Frogs live both in water and on land and require not one, but two, safe and healthy habitats in which to live and find food. It's no wonder then that some frogs are in danger. This important book explains how sensitive frogs are to changes in their environments and why people need to protect them. Children will be fascinated to learn- where frogs live and what they eat- how tadpoles turn into frogs- the dangers of

habitat destruction, pollution, and climate change- how people are helping frogs
