著者:Holzner, Steve

出版者:Paraglyph Inc.

出版时间:2001-1

装帧:平装

isbn:9781932111262

This book was written to the most current ANSI/ISO specifications for C++. It presents file handling, virtual functions, exceptions, debugging, plus the standard template library. It also covers data handling including sorting, searching and encryption, hashing, and parsing. It provides information on data structures, unions,

enumerations, classes, and objects including friend functions, copy constructors, and advanced tricks. It explores working with data and C++ operators, storing data in strings and arrays, creating functions, and standard library functions for data processing and I/O. Hundreds of complete code examples are provided along with in-depth solutions to real-world programming problems.
