For a few years now, Apple has made waves with their revolutionary digital video editing packages, such as iMovie and Final Cut Pro. But now Apple has taken the DV revolution even further with its new DVD Studio Pro software, which makes it easy for

anyone to create and burn their own DVDs on the Macintosh desktop. It's ideal for anybody who wants to output their video projects to DVD discs, including independent filmmakers, video professionals, corporate trainers, and event videographers. Busy professionals will appreciate the practical Visual QuickPro format. Each task is broken down into concise step-by-step instructions, illustrated with plenty of informative screenshots. All the exciting features in DVD Studio Pro merit in-depth treatment: menu creation, chapter markers, scripting, MPEG encoding, asset organization, linking, and output formatting are all clearly explained.
