"The gorgeous photography of innovative surfaces and structures will inspire fiber artists, even those who are drawn to low-tech process."— Fiberarts

This up-to-date book highlights advanced textiles in production and available to the designer, artist, architect, and consumer today. It explores the exciting confluence of art, design, and technology: new textiles that shrink or expand to fit; fabrics developed from carbon, steel, glass, and ceramics; materials that protect the wearer from

environmental extremes on earth and in space.

Featuring a wide selection of textiles at the cutting edge of technology, the book covers the field in three main sections:

- Innovations: how the newest textiles are imagined and produced.
- Applications: from fashion and design to architecture and art.
- Reference: including a glossary, biographies, a bibliography, and directories of addresses and public collections. 300+ color illustrations and photographs.
