出版时间: 2001-10

装帧: Pap

isbn: 9781854861443

The flying of radio controlled gliders and sailplanes has become a major branch of the aeromodelling hobby over the last 30 years. Today, while traditional slope soaring and tow-launched gliders are as popular as ever, a huge variety of powerless flying models are also available, along with a wide range of plans, kits and accessories. Here the

author provides practical advice and information, and explains in a readable and accessible style, how the hobby has developed.
