出版时间:2002-11

装帧:Pap

isbn:9781892836151

Every workshop operation requires knowing some kind of measurement, formula, fact, or calculation. Workshop problems can always be solved with mathematics, but as this

book shows, there is usually a no-math solution too. This book presents mathematical calculations alongside those shop-tested rules. Woodworkers can choose the best approach for their particular situation. Hundreds of illustrations guide woodworkers through the solutions to everyday problems. Packed full of facts, formulas, and shortcuts, this book is suitable for woodworkers of all skill levels.
