isbn:9781568812304

ike virtual reality, augmented reality is becoming an emerging platform in new application areas for museums, edutainment, home entertainment, research, industry, and the art communities using novel approaches which have taken augmented reality beyond traditional eye-worn or hand-held displays.

In this book, the authors discuss spatial augmented reality approaches that exploit optical elements, video projectors, holograms, radio frequency tags, and tracking technology, as well as interactive rendering algorithms and calibration techniques in order to embed synthetic supplements into the real environment or into a live video of the real environment.

Special Features:

Comprehensive overview

Detailed mathematical equations

Code fragments

Implementation instructions

Examples of Spatial AR displays

The authors have put together a preliminary collection of Errata. Updates will be posted to this site as necessary.
