"Environmental Psychology for Design" introduces the discipline of environmental psychology in different and more meaningful ways to design students and does it in a way that encourages students to embrace the concepts as well as incorporate them into their daily practices. The book will consider the historical context of human

habitation, scientific research on the interaction between environments and human behaviours, as well as individual differences related to age, gender, and cultural background. Through concise discussions of research, philosophical perspectives, and illustrations of design in practice, the author integrates fundamental environmental psychology theories into the applied art of the design fields.
