Different design tasks call for different methods. When inserting a new block of

housing into the old town fabric, it often makes sense to work contextually. By contrast, aleatory systems, including surrealist and deconstructivist methods, tend to produce unusual shapes that draw a lot of attention to themselves and are usually expensive to build. If a design that can be realized on a low budget is called for, a modular approach is a promising option.

更喜欢埃森曼那本，这一本的分析内容不够详细

收集了各种主流、学院可教授的设计方法，并简述其来源、优势和局限，比如geometry & proportion, biomorphic architecture, performance form, typology, regionalism, parametric design，也提到某些建筑师较特异的方法，比如surrealists，可以作为基础资料，再进行整理。建议根据设计任务、问题而选定一种或多种设计方法，justification。但分类标准不明确，有些混乱，部分案例的解读比较牵强。

介绍的非常惜墨，这个书给我的感觉就是，看过一遍后，知道的理论流派还是知道，不知道的还是不知道。

看得好累，不过还是很有意思的
