"Architecture in Detail: Colors" examines how colour plays a role in even the most upscale architectural designs. The series itself examines the role of details in contemporary architecture through the work of many emerging and established practitioners, whose projects speak sensitively and energetically on a small scale. Colour is just another one of those details architects use to put their own individual

stamps on their creations. "Architecture in Detail: Colors" is a sound investment for anyone looking to advance their understanding of colour in architectural design, or anyone who simply wants to enjoy the aesthetics of one of the most interesting elements of architecture.
