作者介绍:

Aaron Frost has been in software development since 2005. He got his start as a Software Quality Assurance Engineer, and quickly gained momentum in front-end automation. With some schooling and after several years of experience in testing, Aaron made the switch to software development while working for the LDS Church in Salt Lake City, UT, where he is currently employed. He has focused on several projects there, most of which are Java Stack / Oracle web apps. Currently Aaron develops native-web mobile apps for the over-50,000 servicemen/women worldwide. After discovering his passion for Javascript, Aaron switched his career path from back-end development to front-end open web development. [Steve Olson - Ajax on Java]
